JSON schema file update

- Each Redfish schema version generates a JSON schema file
  - e.g. ComputerSystem.v1_9_0.json, ComputerSystem.v1_9_1.json
- The “un-versioned” JSON schema file is updated for each release
  - e.g. ComputerSystem.json
  - This file contains an “anyOf” array of references to every release
- **Problem:** As the “anyOf” array included every release, it created issues:
  - Large number of files referenced is a performance burden for tools
    - For example, ComputerSystem has 70 references
  - Schema errata corrected by later releases are still exposed to users
    - Errors in schema definitions (e.g. invalid URIs, etc.) break schema-based tools
    - To avoid known and fixed issues, those files must be removed from references
- **Solution:** Un-versioned JSON schema files now contains only the highest-numbered errata for each minor version
  - e.g. ComputerSystem version v1.10.0, v1.9.1, v1.8.1, v1.7.2, etc.
  - This significantly improves tool performance and avoids known issues
    - e.g. ComputerSystem schema drops from 70 references to 12 references

Redfish for OpenAPI™ Specification v3.0

• OpenAPI Specification
  • A community-driven open specification from the OpenAPI Initiative (OAI), The Linux Foundation® Collaborative Project
  • Describes API services in a YAML-format definition document
  • Rich ecosystem of tools for developers and end users

• Supported by Redfish Specification v1.6.0
  • Added support for OpenAPI schema files (YAML)
  • Requires use of standardized URIs
    • Fixed URIs for all Redfish resources
    • Construct path to Collection member using “Id”

• Redfish Schema (DSP8010) bundle 2018.2
  • Now includes OpenAPI YAML files
  • Along with JSON Schema and CSDL files
Redfish Specification v1.6.0

- Fixed or constructed URIs now specified
  - Required for OpenAPI v3.0 support
  - Previous Redfish versions allowed “hypermedia” URI structure, with each URI discovered via links in parent resources
  - Resource Collection members must use “Id” property as URI segment
  - All non-Collection resources must use URIs defined by schema
- Use `RedfishVersion` in `ServiceRoot` to check protocol version
  - Values of “1.6.0” or higher support OpenAPI and fixed URI definitions
  - For values below “1.6.0”, URI tree structure is not specified, clients continue to discover path from `ServiceRoot`
  - Examples:
    - “1.6.0”, “1.6.1”, “1.7.5”, “1.10.2” : supports OpenAPI
    - “1.5.1” : does not support OpenAPI – URI structure cannot be guaranteed

- An “Interoperability Profile” provides a common ground for Service implementers, client software developers, and users
  - A profile applies to a particular category or class of product (e.g. “Front-end web server”, “NAS”, “Enterprise-class database server”)
  - It specifies Redfish implementation requirements, but is not intended to mandate underlying hardware/software features of a product
  - Provides a target for implementers to meet customer requirements and a baseline of schema and property-level support for software developers utilizing Redfish
  - Enable customers to easily specify Redfish functionality / conformance in RFQs
- Specification (DSP0272) defines a machine-readable Profile definition
  - JSON document designed to be human-readable and easy to create
- Profiles will be created by DMTF, partner organizations, and others
  - DMTF will provide re-publication via the Redfish Developer Hub
  - Published profiles will be included in a bundle for download (DSP8013)
- DMTF open source utility available to test conformance to a Profile
